I. Progress Report on Tasks Assigned by the DCI/DDCI

II. Items or Events of Major Interest that have Occurred During the Preceding Week:

A. TECHNICAL GROUP:

[Redacted]

2. FARS (Federal Automated Requisitioning System).

[Redacted] was contacted by [Redacted] (FARS DBM) on Tuesday, 2 August 1988 when she was unable to bring up the system after the power hit [Redacted] on Monday, 1 August 1988. [Redacted] was also unsuccessful and contacted Grumman Corp. to service the machines. Mr. George McDuffy called and asked some preliminary questions. Grumman Technicians determined that the power supply had been damaged from a power surge. The power supply was replaced, however, when the diagnostics tests were run, it appeared that the disk pack had taken a hit and might require creating a new disk pack. The disk pack and the read/write heads on the disk drive appeared undamaged upon visual inspection. After running various diagnostic tests on a scratch disk pack, it was determined that one of the boards connections was bad and the disk pack was undamaged. After re-seating all of the boards, the system was operational. [Redacted] was able to bring up the system and [Redacted] communicated with ODP without error. [Redacted]

3. [Redacted] is currently enrolled in the OL/Mid-Career Course [Redacted] will be in the course from 1 August to 11 August 1988. [Redacted]

B. PLANNING:

25X1 1. Annual updating of the OL Emergency Procedure's Manual was completed this week. Copies, complete with tabs, are being prepared for submission to the DDA. [REDACTED]

25X1 2. In response to an inquiry from the DA Management Staff, IMSS provided a telephonic reply to that staff to identify efforts being done by ORD in support of OL. The reply was coordinated with the DD/L, the EO, and PMS. Essentially, the DA Management Staff was informed of joint OL and ORD efforts to automate the OL contract teams and to develop a Logistics Expert System for Acquisition Planning (LESAP). [REDACTED]

C. CLAS:

25X1 The delivery of the Inventory Control System (ICS) to the Bill of Materials (BOM) conversion program, scheduled for acceptance testing on 25 July, has been delayed for the second week. The BOM to ICS interface program is contingent upon a successful conversion effort and thus is also behind schedule. Initial technical indications point to a sizing problem that should be resolved on or about 9 August. The CLAS Supply Team is anxiously awaiting this delivery and will adjust the acceptance test schedule to accommodate this delay. Any future delays may have an adverse impact on a 1 October 88 IOC. [REDACTED]

25X1 [REDACTED]
